

AI-powered trading automation for advanced investment strategies

Viallion is an AI-powered platform that brings intelligence and efficiency to traditionally manual trading strategies. Developed in collaboration between traders and industry experts, it helps investment teams evolve their approach to the market—replacing manual processes with data-driven, algorithmic execution.

At its core, Viallion is built to handle complexity: analyzing large volumes of market data, testing hypotheses, and executing trades in real time with precision and control. By embedding human insight into disciplined, rule-based automation, it minimizes emotional bias and operational friction—while maximizing consistency, scalability, and traceability.

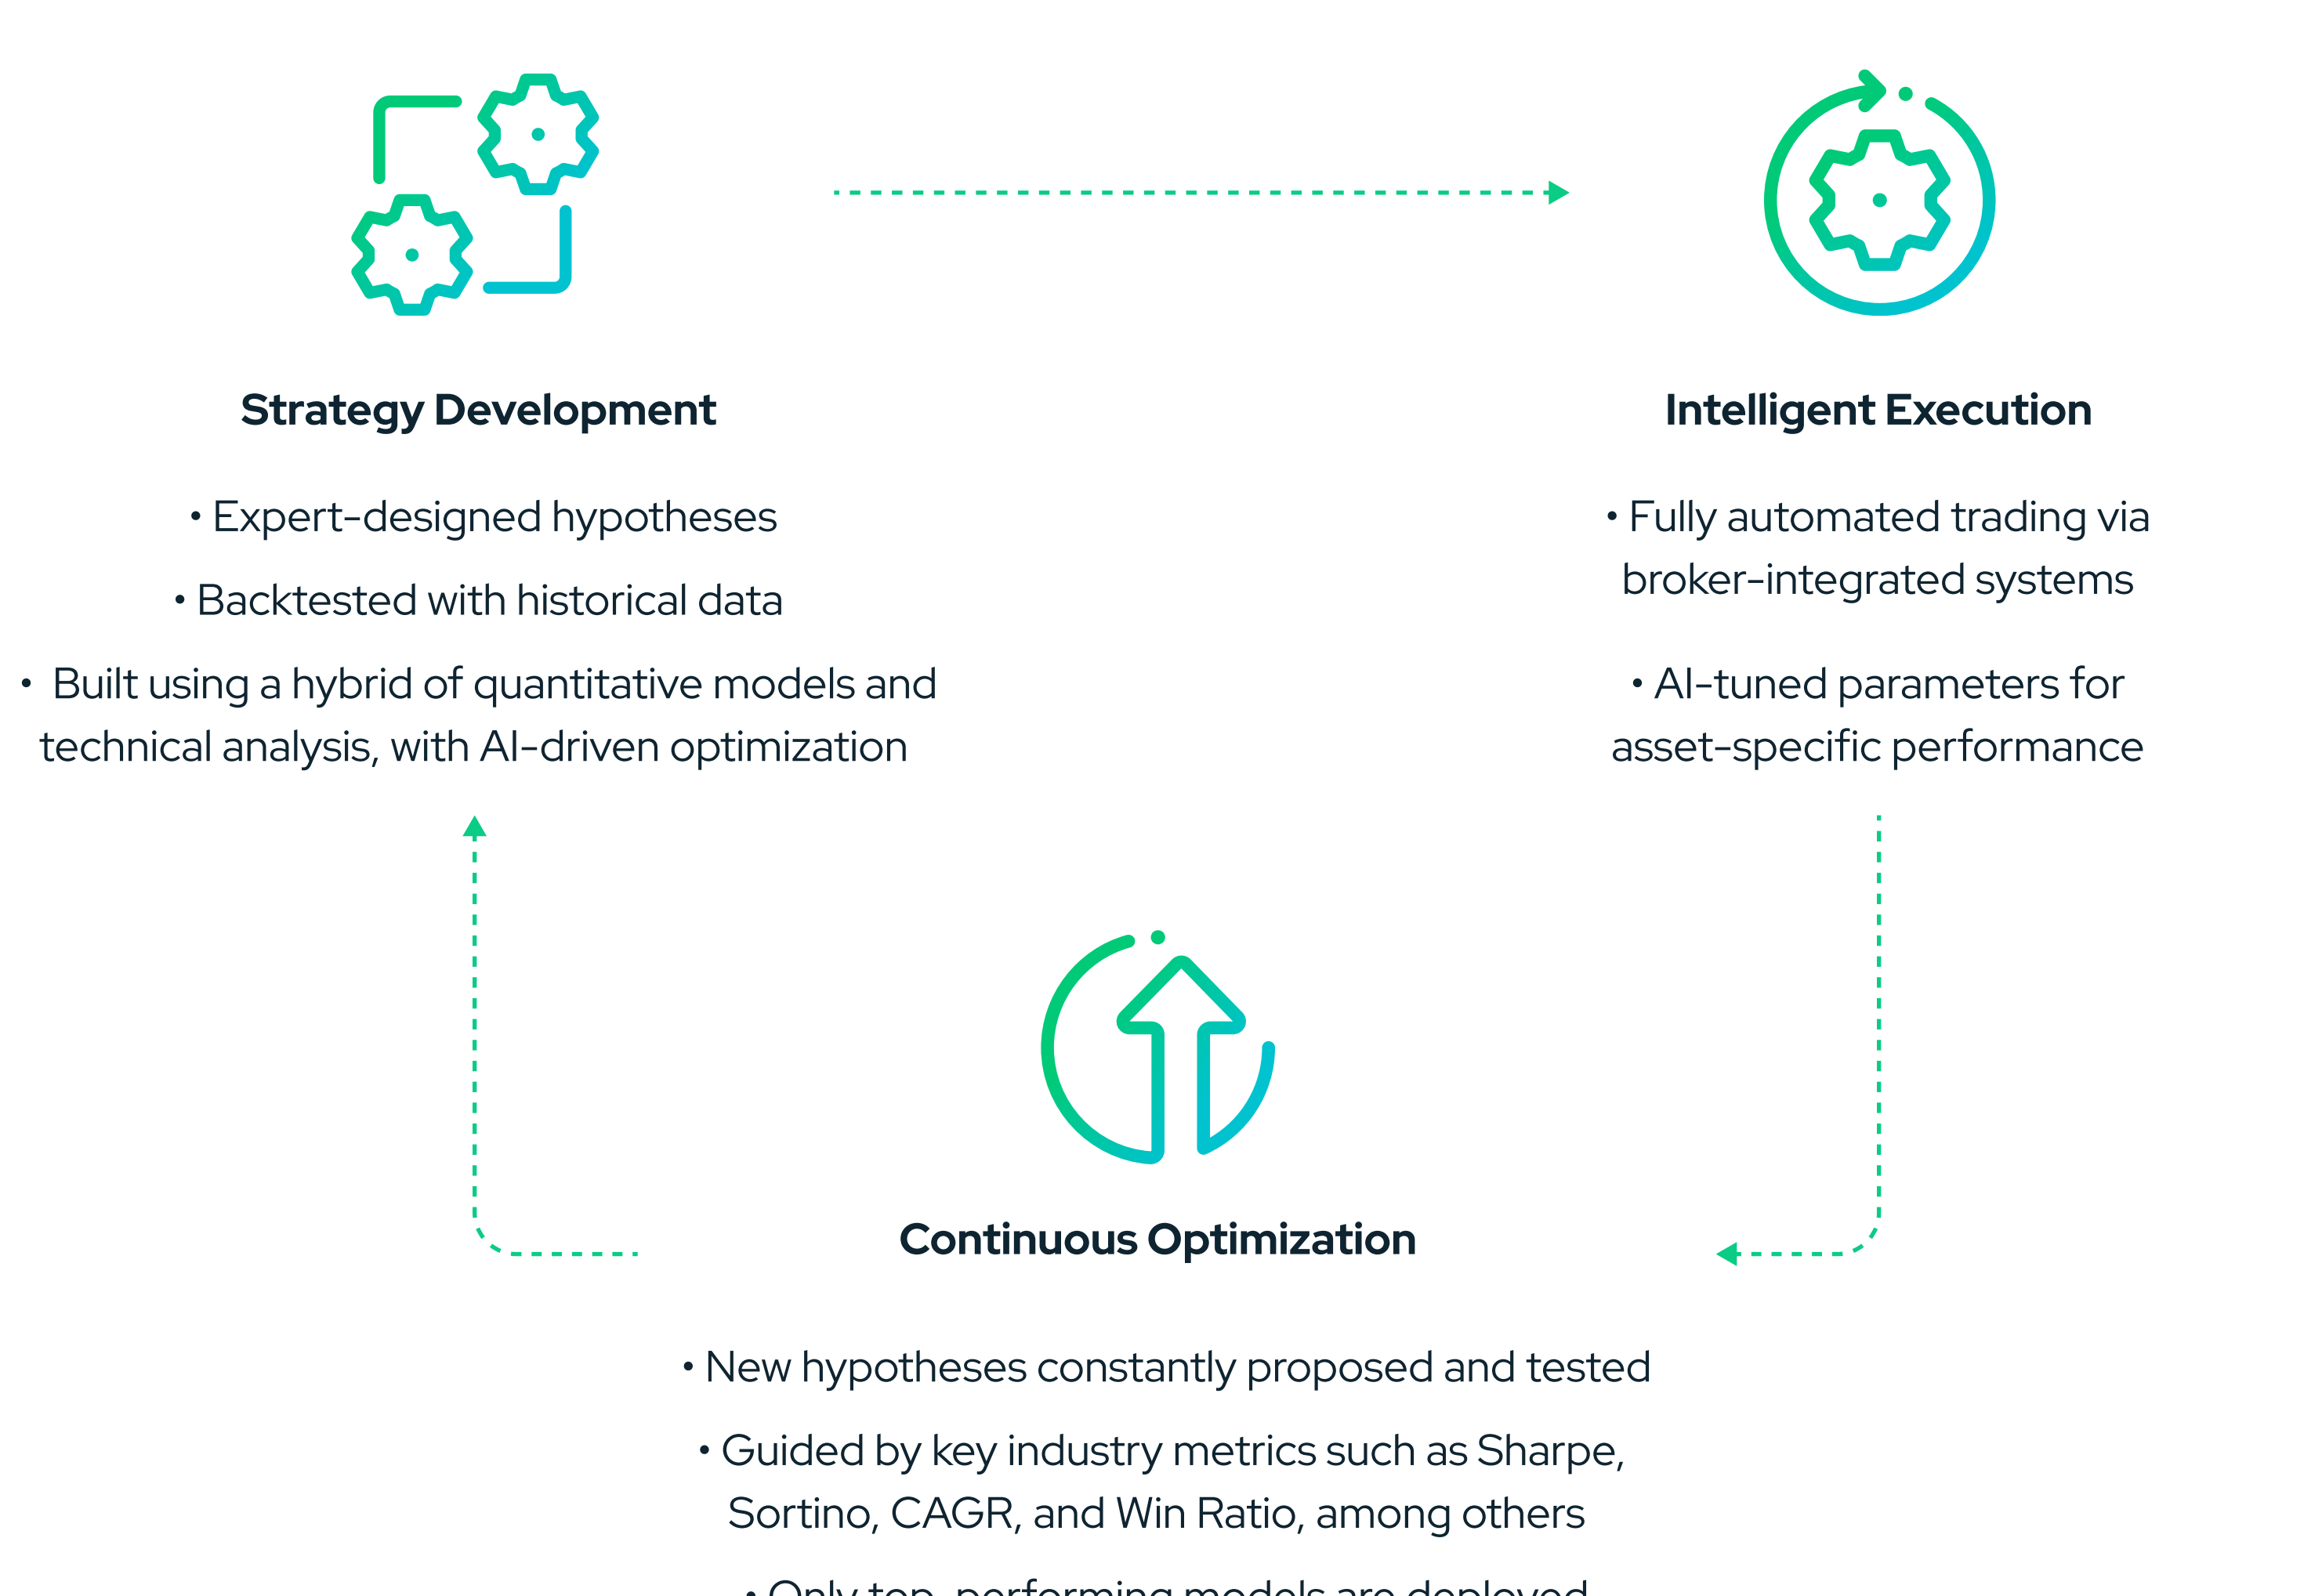

Why it matters

Markets are dynamic and often unpredictable. Teams operating in this environment need tools that provide consistency, control, and adaptability across different conditions. Viallion delivers:

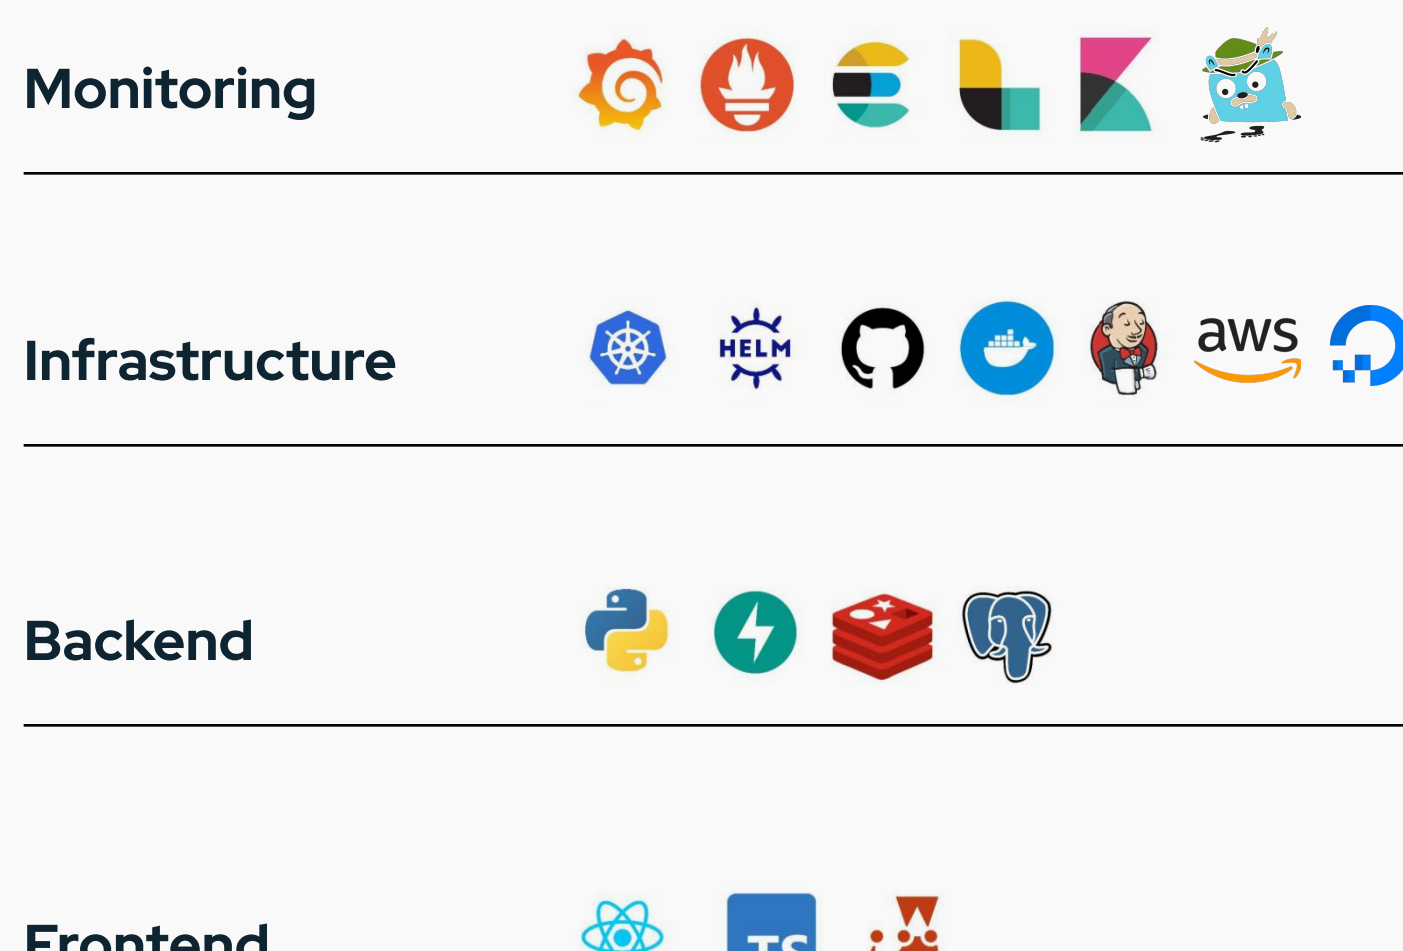

- Real-time, fully automated execution
- Optimized strategy performance by asset
- Emotion-free decision-making rooted in discipline and data
- Audit-ready traceability and control
- Scalable operations—without growing your team

How it works

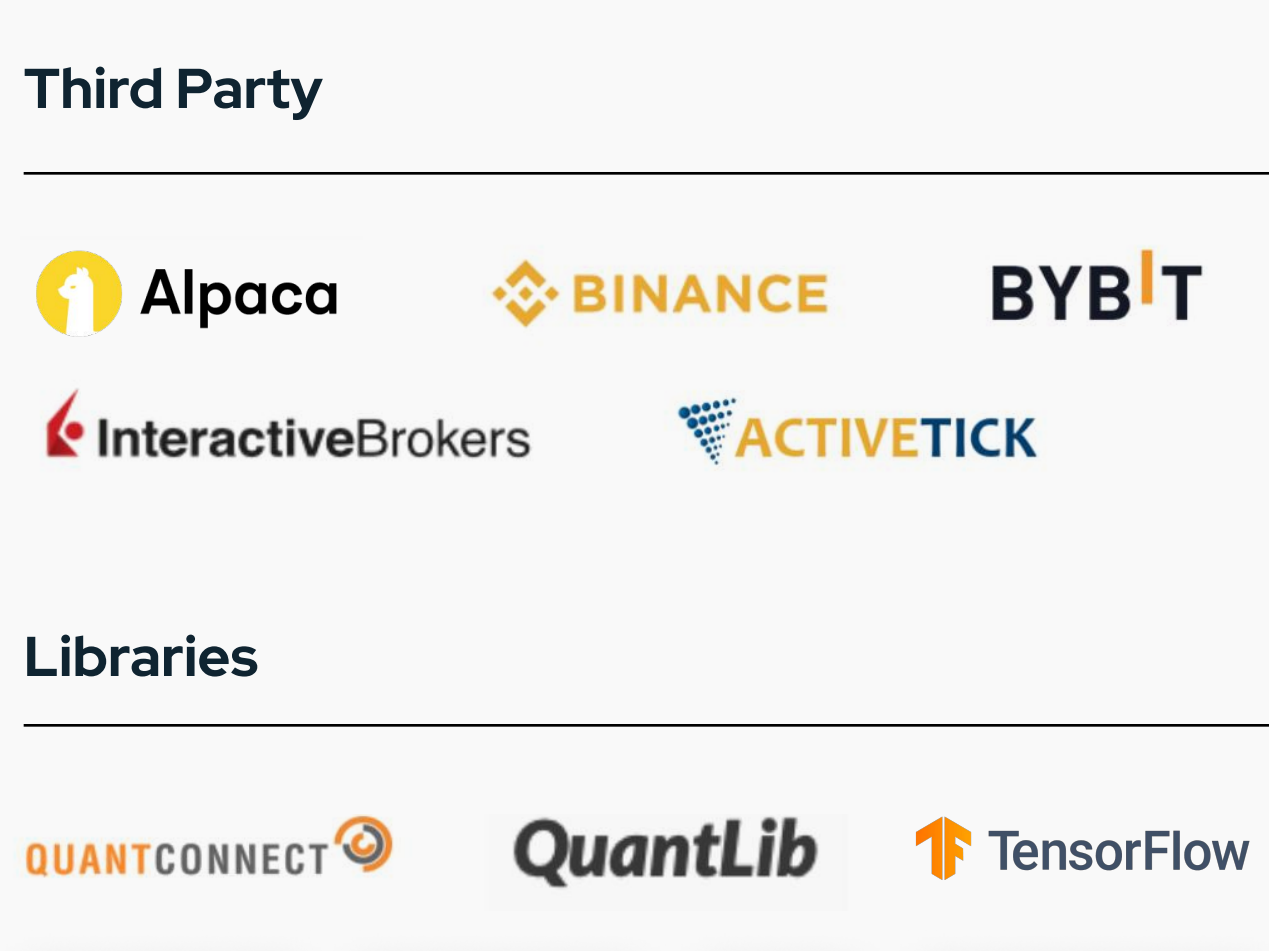

Viallion runs on a 3-step automation engine:

Technology stack

Industry tools

Meet our expert team

Cesar Donofrio
Co-Founder

Co-founder and CEO at Making Sense. Entrepreneur by election. "I believe in the power of partnership and collaboration."

Ignacio Caldentey
Co-Founder / CEO

Co-Founder at Making Sense LLC. Part of all the products we've made. Outdoors and nature lover.

About Making Sense

+300 Collaborators

+15 Years of consistent successful tech development

+100 Projects

4 Companies created from scratch

Proven in the field

Viallion isn't just a prototype—it's already operational in live investment environments. The platform powers Aconcagua Hedge Fund, our proprietary investment vehicle, and is being tested by select private investors and capital allocators. In each case, it has demonstrated consistent performance, precise execution, and end-to-end traceability, with strong risk control and low volatility.

These real-world deployments confirm Viallion's ability to operate under market pressure, adapt to volatility, and support professional-grade decision-making—bridging the gap between algorithmic innovation and trusted capital management.

Built by the Making Sense Innovation Lab

Viallion was developed by the Innovation Lab at Making Sense—leveraging 15+ years of tech expertise building high-performance platforms for U.S. companies. The Lab focuses on creating market-ready, tech-driven solutions with measurable business impact.
